

# Unleash the Potential

## Mining

WirelE applies its proven Carrier-Grade networks to the diverse challenges and communication environments of the Mining industry, matching mission-critical requirements with mission-accomplished networks.

### Solving Critical Issues

The Mining Industry's **top issue**, according to the 2014 Deloitte Mining Report, is the **Cost of Extraction**. Increasing costs of doing business, directly effects profitability, which establishes Mining as having the lowest returns by sector. Sustainable cost management programs, rooted in **innovative technology implementation**, offer the best approach to dealing with this issue.

WirelE's "**Virtual Fiber**" networks allow for the Mining industry to drive multiple layers of efficiencies through technology. Top mining applications & strategies such as **real-time data acquisition**, **automation of remote operations**, and **system standardization** require an "**always-on**" network environment, with SLAs and 24/7 monitoring, which match the mission-critical nature of mining's demanding operations. Business productivity applications such as **unified communications** and **tele-presence** could also facilitate new **efficiencies in training**. The portable nature of WirelE's solution architecture, also enables "**Camp-in-a-Box**" environments, even in hard-to-reach areas, and provides these camps with all the functionality of head offices.

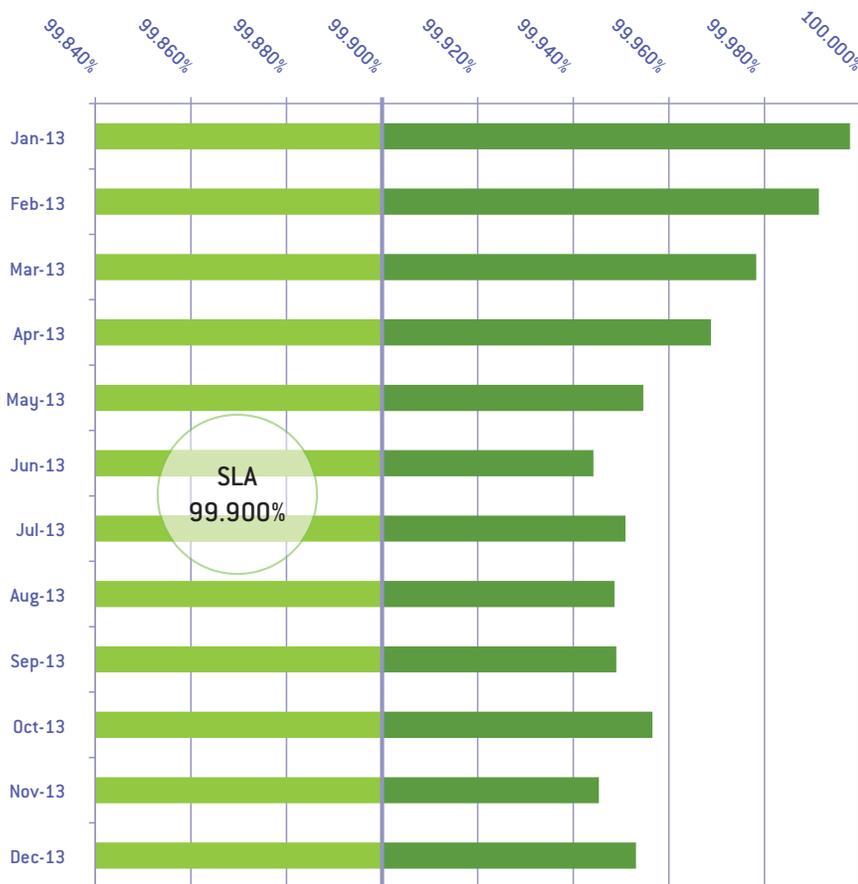

## Over-Engineered to Over-Perform

WireIE's CE 2.0 Certified networks are built to meet its industry leading SLAs, featuring minimum 99.9% availability, even in adverse weather conditions. This means that our service level guarantees are maintained throughout ice storms, fog, and other varying weather and temperature conditions. WireIE only utilizes licensed spectrum for its digital radio deployments, which eliminates any possibility of interference and downtime.

### Network Availability - YTD 2013

YTD Avg Monthly Network Availability

End-to-end circuit performance exceeded  
 "three and a half nines" for the year!  
 (99.953%)

WireIE has led with innovation since our inception, delivering high speed connectivity to communities around the globe.

Rob Barlow  
 President & CEO, WireIE

We are delighted to continue to raise the bar by being the first in Canada to deliver MEF Carrier Ethernet 2.0 to rural, remote and hard to service business

customers. Our attainment of MEF Carrier Ethernet 2.0 Certification means our clients will be able to roll out new applications designed to drive business productivity efforts without having to worry about quality of service. Our high availability, low latency capabilities are un-matched and our commitment to strict SLA's has made us the standard in the most demanding environments across Canada.
